

OSG ST&E Backup Restoration Guide

All fermigrid machines are backed up to the central backup service, TiBS, on a nightly basis.

If a file or directory is lost, place a call to the helpdesk (x2345) or send email to helpdesk@fnal.gov to have it restored. Include the node name (e.g., ste.opensciencegrid.org currently resides on fg1x0.fnal.gov), directory or file to be restored, the last known good date (otherwise, the most recent backup will be restored), and the location where you'd like to have the recovered files placed, for example /var/tmp/ste/.

The ST&E directory and config files are:

Web server directory:

/var/www/html/ste/

Web server configuration file:

/etc/httpd/conf.d/ste-ssl.conf

Database:

/var/lib/mysql
